3. Program description

- bsp_at8236.h

```
#ifndef __BSP_TB6612_H_
#define __BSP_TB6612_H_

#include "ti_msp_dl_config.h"

void init_motor(void);

void L1_control(uint16_t motor_speed,uint8_t dir);
void L2_control(uint16_t motor_speed,uint8_t dir);
void R1_control(uint16_t motor_speed,uint8_t dir);
void R2_control(uint16_t motor_speed,uint8_t dir);

#endif
```

Define four motor control functions.

- bsp_at8236.c

```
void L1_control(uint16_t motor_speed,uint8_t dir)
{
if(dir)
{
DL_TimerA_setCaptureCompareValue(PWM_L1_INST, motor_speed, DL_TIMER_CC_0_INDEX);
DL_TimerA_setCaptureCompareValue(PWM_L1_INST, 0, DL_TIMER_CC_1_INDEX);
}
else
{
DL_TimerA_setCaptureCompareValue(PWM_L1_INST, 0, DL_TIMER_CC_0_INDEX);
DL_TimerA_setCaptureCompareValue(PWM_L1_INST, motor_speed, DL_TIMER_CC_1_INDEX);
}

}
```

The L1_control function is used to control the speed and direction of the L1 motor by adjusting the duty cycle of the PWM signal.

motor_speed and dir represent the motor speed and motor direction of the motor respectively.

Note: The project source code must be placed in the SDK path for compilation,

For example, the path: D:\TI\M0_SDK\mspm0_sdk_1_30_00_03\TB6612
